# Kamino Private Credit connects DeFi users on Solana with institutional Bitcoin-backed lending.

Private Credit deploys capital to regulated lending operations that make overcollateralized loans to verified institutional borrowers. BTC collateral is secured in Qualified Custodians, with no title transfer to the Lender

Private Credit provides a high level of transparency, with real-time collateral and loan-health reporting, and monthly third-party collateral attestation.

The vault operates with conservative risk parameters including 50% maximum LTV ratios and no rehypothecation of collateral.

# What makes Kamino Private Credit unique

| Attribute                       | Traditional DeFi                                            | Kamino Private Credit                                          |
|---------------------------------|-------------------------------------------------------------|----------------------------------------------------------------|
| Yield Source                    | Onchain Borrowing Demand                                    | Institutional BTC-backed lending                               |
| Underlying Borrower Profile     | Pseudonymous                                                | KYC-verified institutional entities                            |
| Collateral Location             | Smart Contracts                                             | Qualified custodians                                           |
| Collateral Coverage             | Up to 86%                                                   | 50% max LTV (2:1 coverage)                                     |
| Regulatory Oversight of Lending | None                                                        | Funds only deployed to Swiss & Liechtenstein-regulated Lenders |
| Liquidity                       | Instant, utilization-dependent (utilization typically ~85%) | Hybrid (5-10% instant + queued)                                |
| Rates & Term                    | Floating based on supply/demand                             | Fixed Rates. Fixed Term.                                       |

# How it Works

- 01 Deposit USDC into Kamino Private Credit Vault
- 02 Funds move through a Special purpose vehicle (SPV) to regulated lending operations. Overcollateralized BTC-backed loans are originated to institutional borrowers.
- 03 Collateral remains secure at qualified custodians under a tripartite agreement, with no title transfer to the borrower. Reporting transparency will be maintained throughout, and 3rd party attestation will be available to Kamino users.
- 04 Returns from the lending activity flow back to vault depositors.

One deposit.  
Passive yield.  
Institutional credit exposure.

# Getting Started with Kamino Private Credit

## Deposits

Deposit USDC to receive vault share tokens at current vault Net Asset Value (NAV).

Share value appreciates as the vault earns interest from lending activities. The process is permissionless - deposit, receive shares, accrue value.

As part of the deposit process, you will be asked to agree to a loan agreement with the Private Credit SPV and accept the terms.

## Withdrawals

Instant redemption is available up to the 5-10% liquidity buffer (explained in the operational information section).

Liquidity will be managed such that a liquidity buffer is maintained. If withdrawal demand exceeds the liquidity buffer, there may be a waiting period until underlying loans come to term and are repaid.

Loans are originated on a series of rolling 60 day duration.

# Operational Information

| Parameter                  | Terms                                                                    |
|----------------------------|--------------------------------------------------------------------------|
| Target Yield               | 6–8% APY                                                                 |
| Deposit Currency           | USDC                                                                     |
| Instant Liquidity Buffer   | 5-10% of AUM                                                             |
| Redemption Model           | Hybrid (instant buffer + queued)                                         |
| Underlying Collateral      | BTC only                                                                 |
| Maximum LTV                | 50%                                                                      |
| Collateral Rehypothecation | Prohibited. BTC title remains with the Borrower                          |
| Regulatory Oversight       | Counterparties regulated under (Liechtenstein) FMA & (Switzerland) FINMA |

# Reporting & Transparency

Institutional BTC-Backed yields introduce a reliance on external lenders and custodians.

Thus, Kamino Private Credit ensures that: funds are deployed only to highly regulated institutions in top tier jurisdictions; collateral is always in qualified custodians; and high levels of transparency are maintained at all times enabled by continuous reporting.

Reporting will include the following:

## **Collateral Position Reporting**

Ongoing reporting attesting the aggregate BTC collateral value backing loans.

## **Real-Time Loan Status Reporting**

Ongoing reporting that attest to active loan amounts, weighted average LTVs, and overall loan health, powered by Accountable.

## **Third-Party Attestations**

Independent verification of positions by professional accounting firms, on a monthly recurring basis.

# Liquidity Management

Kamino's Private Credit vault structure maintains multiple liquidity management layers to manage redemptions:

**Kamino Vault maintains 5-10% instant liquidity** for immediate redemptions.

**Defined loan maturities** enable predictable liquidity planning; Kamino interface reflects time to liquidity.

**FIFO redemption queue** processes excess redemptions in orderly fashion when buffer is exhausted (feature to be introduced Q2/Q3 2026).
