Real yield. Established track record.

What is PRIME?

A yield-bearing token that generates returns by providing short-term warehouse financing to licensed US home equity line of credit (HELOC) originators.

Where does the 8% yield come from?

Yield generated from warehouse lending to US HELOC originators. Yield accrues through PRIME token price appreciation.

Why Kamino?

PRIME is the fastest-growing RWA in DeFi, with Kamino as its primary distribution partner. 90% of PRIME in circulating is deployed on Kamino.

Kamino Multiply amplifies PRIME yield to 11-23% APY via positive carry against USDC, CASH, or PYUSD borrowing.

How Prime Works

- 01 Figure originates HELOCs to prime US borrowers — 744+ FICO, 62% CLTV, \$709K average home value.
- 02 Licensed originators post HELOCs as collateral into the warehouse facility at 90% LTV with full recourse.
- 03 DeFi lenders provide capital via PRIME and earn ~8% yield from borrower interest payments.
- 04 Every ~42 days, HELOCs exit to securitization: 67% in AAA, 33% distributed across AA- to B-. Warehouse repaid, fresh loans cycle in.
- 05 Yield flows to Solana as the PRIME token via Chainlink CCIP bridge. Fully composable across DeFi.

Nasdaq: **FIGR**

7-Year Track Record

2020-2021 (COVID): Continued originations, <2% delinquencies. No capital losses.

2022-2023 (Rate hikes 0→5.25%): Some unprofitable quarters, zero capital losses to investors.

2023 (Banking crisis): Maintained securitization access throughout.

H2 2025: \$946M in AAA-rated securitizations. 58% net margin.

FY2025: \$8.4B marketplace volume (+63% YoY). Q4 volume \$2.7B (+131% YoY).

\$505M+

Collateral Quality

Borrower Profile

Weighted Avg. FICO	744-754
Average Home Value	\$709,085
Average Borrower Income	\$182K-\$195K
Combined LTV	62-65%
Debt-to-Income	36.6%
Weighted Avg. Coupon	9.0-9.2%
Average Loan Size	~\$90,000
Loan Type	Fixed-rate, fully amortizing

744+ FICO = ~60th percentile of US credit scores. Firmly prime — well above the subprime borrowers that drove 2008 losses.

Credit Performance

Figure HELOC MoB Performance

(180+DQ by Yearly Vintage)

Historical Loss Performance

Cumulative severe delinquencies (180+ days past due) have peaked **below 1.75%** across every origination vintage since 2019, with recent cohorts tracking at or below historical levels.

Built for capital preservation.

Securitization exit consistently receives AAA ratings from S&P, Moody's, DBRS Morningstar, and KBRA.

Overcollateralization & Auto-Markdown

HELOCs valued at \$1.03 enter at \$1.00; max advance \$0.90 (90% LTV). Any HELOC 30+ days delinquent is immediately marked to \$0.

At 93% LLTV breach, collateral is seized and auctioned. Full recourse to licensed originators.

SEC 1940 Act Registration

YLDS is the first SEC-registered yield-bearing stablecoin. Daily NAV mandated by SEC. Public prospectus. Independent directors.

Contractual redemption rights enforceable in federal court. Same framework governing mutual funds.

Qualified Custody (UMB Bank)

70-year-old Fed-regulated national bank. \$70B+ assets under custody.

Overseen by Federal Reserve and OCC. Segregated, bankruptcy-remote structures. Daily reconciliation and independent verification.

Short Duration ~42 Days

Exposure rolls continuously through the warehouse window.

By the second borrower payment (~day 60), the HELOC has already been securitized and exited PRIME. No long-duration credit risk.

PRIME on Kamino

PRIME is now the largest RWA actively deployed in DeFi, driven by Kamino’s PRIME Market.

Risk-Adjusted Opportunities

Tranche-Like Structure

Kamino’s PRIME lending market naturally splits into tranches: leveraged Multiply users take the junior position (first to absorb losses), while stablecoin lenders sit senior (protected by the buffer that Multiply users provide). This self-selecting dynamic means higher risk takers provide a cushion for more conservative participants

Tranche-Like Risk Structure

Role	Risk	Annualized Return
Multiply (Junior)*	First loss, first to get liquidated	11-23%
Stablecoin Lenders (Senior)	10% PRIME drawdown buffer before bad debt	5-5.5%
PRIME Holders (Base)	Direct exposure	~8%

* Multiply: Leveraged carry trades - Post PRIME collateral earning 8% to borrow stablecoins at 6%, up to 8x.

PRIME Multiply

Annualized Net Yield by Leverage

Leveraged Carry Trades

Amplify PRIME yield through positive carry — the spread between collateral yield and borrow cost.

~90% of all PRIME on Kamino flows through Multiply. This is the dominant use case and primary source of PRIME demand.

How it Works

In a single transaction:

1. Deposit PRIME as collateral (earning ~8% base yield)
2. Borrow stablecoins against it (paying ~5-7%)
3. Buy more PRIME with borrowed stablecoins
4. Repeat — up to 8.5x

PRIME Multiply Safeguards

Feature	Overview
Utilization-capped borrow rates.	Borrow utilization on the PRIME market is capped at 90%. The borrow rate curve is engineered so that the Multiply loop remains profitable up to 97% utilization — a 7% buffer above the cap.
3% LTV buffer at max leverage	Max borrow LTV is 88%; liquidation LTV is 91%. At max leverage, there is a 3% buffer to the liquidation threshold, providing a margin of safety against borrow rate volatility and potential PRIME price fluctuations
Verified historical performance.	PRIME Multiply performance is independently verifiable with Kamino's live backtesting tool, using historical data to simulate performance at different leverage levels. Available here .

PRIME Multiply Realized Performance

Cumulative Growth Since Launch:
PRIME vs Leveraged Multiply

Growth of position at different leverage levels, based
on real average APYs (12/04/2025 - 02/18/2026)

* Past performance does not guarantee future results. Leveraged positions
carry additional risk including liquidation.

Realized PRIME Multiply Returns (76D): **PRIME 1x – 1.61%** **MULTIPLY 3x – 2.47%** **MULTIPLY 5x – 3.26%** **MULTIPLY 8x – 4.43%**

Battle-tested. Transparent. Trusted.

Kamino is Solana's largest on-chain lending and risk infrastructure provider with an established operating record at scale. Kamino's infrastructure is fully open source and has undergone 18 independent security audits and multiple formal verifications.

The protocol is used by institutional participants including licensed exchanges, federally chartered digital asset banks, and publicly listed companies.
