Introduction

Deploy managed lending vaults on
Solana's largest credit platform.

Curator Vaults enable asset managers, fintechs, and institutions to create and operate yield vaults that accept deposits, allocate capital across Kamino's lending markets and private credit products

Vaults abstract market selection and risk management from depositors, allowing professional curators to construct and actively manage yield portfolios on behalf of users. Yield accrues automatically. You earn management and performance fees.

You control allocation strategy, fee structure, risk parameters, and reward distribution — all through Kamino's purpose-built management interface and full developer toolkit.

Yield vaults can be integrated natively into your platform or app — offering in-app yields to your users powered by your vault

Battle-tested. Transparent. Trusted.

Kamino is Solana's largest on-chain lending and risk infrastructure provider with an established operating record at scale.

Kamino's infrastructure is fully open source and has undergone 18 independent security audits and multiple formal verifications. The protocol is used by institutional participants including licensed exchanges, federally chartered digital asset banks, and publicly listed companies.

How it Works

Launch and integrate a yield vault in a few clicks

01

Create A Vault

Choose deposit token (e.g. USDC), set fees, configure parameters

02

Configure Allocations

Select yield sources across Kamino markets and products, assigning target weights and caps to each

+

Embed In Your Platform

If applicable, integrate deposits, withdrawals, and position tracking into your own app

03

Users Deposit

Users deposit on Kamino or through your own platform. Capital is automatically routed to reserves per your allocation targets

04

Yield Accrual

All returns flows back into the vault, automatically appreciating user position value

05

Earn Curator Fees

If configured, performance and AUM fees accrue continuously, collected at your discretion

Yield Sources

Kamino offers a diverse range of products and markets for curators to deploy into

RWA Markets

- Lend against tokenized RWAs spanning across home loans, equities, reinsurance underwriting, private credit, and more
- 6 RWA Markets with over \$1.2B Market Size
- Active market risk management by Kamino

Crypto Asset Markets

- Lend against crypto-native assets including BTC, SOL, yield-bearing stablecoins, and more
- 10+ Markets with over \$2B Market Size
- Active market risk management by Kamino

Kamino Private Credit

- Deploy into Kamino's USDC Private Credit Vault for BTC-backed institutional yields — available exclusively on Kamino
- Yield generated via Swiss and Liechtenstein-regulated overcollateralized lending operations
- Counterparties include institutions and regulated banks

Security & Risk Controls

PROTOCOL-LEVEL

Whitelisted Reserves

Permanently restrict allocations to Kamino-approved reserves only. Enforced at smart contract level. Irreversible once enabled — even compromised admin keys cannot allocate to unverified markets.

Insurance Pool (First Loss Capital)

Curators lock their own capital with a 30-day withdrawal cooldown. Absorbs losses before depositors. On-chain verifiable commitment.

OPERATIONAL

Multisig Governance

All production vaults managed via Squads multisig. No single key can unilaterally modify vault parameters.

Role Separation

Vault Admin (full control, two-step transfer) and Allocation Admin (weights & caps only). Delegate routine operations without exposing full control.

Open Source & Verified

All core contracts open source on GitHub. Verifiable on-chain builds. 4 formal verifications providing mathematical proofs of correctness.

VAULT PARAMETERS

Allocation Caps

Hard per-reserve maximums limiting concentration risk, independent of weight-based targets.

Liquidity Buffer

Configurable unallocated reserve ensuring instant withdrawal availability at all times.

Withdrawal Penalties

Returned to vault (not curator). Prevents deposit-yield-claim-withdraw exploits.

Deposit & Invest Limits

Minimum amounts, invest delays, and per-reserve rate limiting to prevent dust attacks and rounding exploits.

Embed in Your Platform

Offer yield directly to your users — in your own app, under your own brand. Your users interact with your interface; Kamino handles the infrastructure.

kamino.com/build ↗

REST API

Build deposit & withdrawal transactions. Read vault metrics, user positions, P&L history, and reward data. No SDK dependency required.

TypeScript SDK

Full programmatic control: create vaults, manage allocations, build transactions, query on-chain state, claim rewards. Deepest integration path.

CLI

Command-line vault operations with multisig output. Create vaults, update allocations, manage fees. Generates Squads-compatible transactions.

Curation Feature Guide

Capital Allocation

Revenue & Fees

Fixed Rates

Conditional Liquidity

Data & Monitoring

Capital Allocation

Liquidity management features for granular control over vault behaviour

Feature	Overview
Automated Rebalancing	Bots sync allocations every 15 minutes, keeping positions aligned with targets as market conditions shift. Manual rebalancing is available at any time.
Allocation Caps	Hard maximum amounts per allocation, independent of weights. If an allocation’s weight implies more than its cap allows, excess is distributed to remaining reserves.
Liquidity Buffer	Configure unallocated weight — capital held in reserve specifically to service instant withdrawals without rebalancing from lending reserves. Buffer can be absolute or relative to vault size

Revenue & Fees

Earn revenue via AUM and interest generated

Kamino itself takes no fees or revenue from curator vaults — all fees added to vaults are at the discretion of curators

Performance Fee

Share in the interest generated by your vaults by taking a cut of vault earnings.

AUM Fee

Earn an annual percentage on the total assets in your vault. Taken on a continual basis according to vault AUM.

Fixed Rates. Fixed Terms.

Predictable yields and
lending terms for curators.

01

Curator-Driven

Kamino Fixed Rate yields will be
available exclusively via curator vaults

02

Higher Effective Yields

Fixed Rate allocations are demand-
driven — tending towards 100%
utilization, thus more capital efficiency

03

Conditional Liquidity

Allocate funds on-demand via a novel
conditional liquidity system, enabling
zero opportunity cost for curators

A vertical strip on the left side of the slide shows a close-up of a US \$100 bill, focusing on the portrait of Benjamin Franklin and the '100' denomination.

Conditional Liquidity

Capital efficient allocation system,
designed by Kamino

How It Works

Curators can make conditional allocations into fixed rates reserves.

Capital only deploys when borrowers request liquidity. Designed for fixed-rate reserves.

Zero Opportunity Cost

Funds remain in floating-rate reserves earning yield. When a borrower requests a fixed-rate loan, the vault allocates and rebalances on-demand

Priority System

Controls which standard reserves can be drawn down to fund conditional reserves, and in what order.

Curators define the liquidity hierarchy across their allocation strategy.

Data & Monitoring

Comprehensive API & in-app dashboards for vault monitoring, reporting, and integration with existing infrastructure.

Vault Metrics

Real-time and historical TVL, APY, exchange rate, and holdings across all vaults.

Allocation Data

Current allocation state, per-reserve distribution, and historical allocation volume changes over time.

Depositor Data

Per-user positions, P&L in USD/SOL/token denomination, transaction history, and cumulative performance metrics.

Reward Programs

Active incentive programs, reward APYs, distribution status, and custom reward configuration for vault depositors.

Analytics Suite

Vault-level analytics on Kamino's vault management UI

Kamino Curator Platform

Integrated suite for vault management and analytics.

curators.kamino.com ↗

Platform Overview

curators.kamino.com ↗

Allocation Dashboard

View and edit allocation weights, caps, types, and priorities.

Batch-edit multiple reserves in a single transaction with real-time vault APY projections.

Fee & Parameter Controls

Configure performance and AUM fees, withdrawal penalties, minimum deposits, liquidity buffers, and more, with full simulation before execution.

Multisig Integration

Manage vaults via Squads Multisig for enhanced security.

SquadsX Wallet Extension support for seamless in-app management.

Developer Toolkit

Full TypeScript SDK, Kamino Manager CLI, and read-only REST API for programmatic operations, automated strategies, and custom dashboards.
