

Credit Infrastructure for Institutional Finance on Solana

kamino

kamino.com

Battle-tested. Transparent. Trusted.

Kamino is Solana's largest on-chain lending and risk infrastructure provider with an established operating record at scale.

Kamino's infrastructure is fully open source and has undergone 18 independent security audits and multiple formal verifications. The protocol is used by institutional participants including licensed exchanges, federally chartered digital asset banks, and publicly listed companies.

Protocol Security

Kamino has industry-leading risk management and smart contract security practices

Security

- 18 independent security audits across all protocol components
- 3 formal verifications — mathematical proof of invariants by Certora, 6-month review by Ottersec confirming system stability under all stress conditions
- Onchain verified build
- Fully open source
- \$1.5M Immunefi bug bounty — one of the largest in DeFi

Our Track Record

- \$18.3B+ in loans originated
- Zero bad debt
- Zero exploits
- Zero security incidents
- 3+ years live in production
- 3 formal verifications
- Onchain verified build

Oracle Infrastructure

Kamino has developed sophisticated in-house oracle infrastructure, battle tested over 3 years

Transparency & Security

- Kamino's oracle infrastructure is multiple times audited and continuously evaluated - with monthly to bi-monthly audits
- 0 incidents to date
- Fully open source
- Included in Kamino's \$1.5M Immunefi [bug bounty](#)

Multi-Feed Infrastructure

- Composes, aggregates and cross checks all major oracle providers, including Chainlink, Pyth, Redstone.
- MostRecentOf pricing mechanism to ensure freshest prices across available providers

Robust & Versatile

- 40+ Oracle types to accommodate various asset requirements — secondary market liquidity tracking, NAV-based pricing, short and long TWAPs, stablecoins, and more
- Early detection of anomalies
- Circuit breakers
- Fallback mechanisms
- Multiple layers of redundancy.

Why Kamino?

Attribute	Kamino	Aave	Morpho
Bad Debt History	\$0 — across \$18.3B originated. Zero exploits. Zero security incidents.	\$1.7M (Eisenberg CRV exploit, Nov 2022); \$400K on 10/10/2025 liquidation event	\$25.4M exposure (MEV Capital, Nov 2025); \$230K oracle exploit (Oct 2024)
Oracle Infrastructure	In-house Scope oracle — triple-audited. Pyth + Chainlink reference feeds. Full protocol control over pricing logic	Chainlink-only, managed externally by Chaos Labs (led to \$21M wrongful liquidations, March 2026)	External oracle configs (led to \$230K exploit)
Custom Markets	White-glove market setup and risk management, tailored to institutional needs	No custom market support	No custom market support — fully reliant on third-party curators
Custom Vaults	White-glove vault setup and management, tailored to institutional needs	No vault infrastructure	Fully reliant on third-party curators
Institutional Credit Products	Off-Chain Collateral, Private Credit, Fixed Rates — all built in-house & audited	Arc (Retired)	None
Qualified Custody	Anchorage Digital Integration with triparty agreemeents and Chainlink integration	None. Non-custodial only.	None. Non-custodial only.
KYC/KYB Capability	End-to-end: ability to trace every dollar of yield back to KYC/KYB-verified borrower	Aave Arc — retired	3rd party via Keyring
Solana	Native — sub-second finality, near-zero fees	No Solana presence	No Solana presence

Kamino for Curators

Launch your own bespoke borrow markets and lending vaults via Kamino's management infrastructure

Borrow Markets

- Launch isolated markets for any asset class — crypto, RWAs, stablecoins
- Full parameter control: collateral types, LTVs, interest rate curves, oracles
- Revenue share on all interest generated in your market
- Dedicated markets for institutional borrowing needs (e.g. Off-Chain Collateral, Private Credit)

Lending Vaults

- Accept deposits, allocate capital across Kamino markets and yield products
- Automated rebalancing
- Earn performance fees on yield and AUM fees on deposits
- Insurance pool: lock capital to underwrite your allocations
- Custom liquidity buffers to ensure instant withdrawals for depositors

Management Platform

- Full management interface for markets, vaults, incentives, and oracles
- SDK, CLI, and REST API for programmatic operation
- Multisig governance for production deployments

Institutional Product Ecosystem

Institutional Yield API

Off-Chain Collateral

Fixed Rates. Fixed Terms.

Private Credit

RWA DEX

Institutional Yield API

KYC/KYB Compliant Architecture

Any fintech can offer institutional-grade yield via API to their users, with Kamino as the backend.

Yield accrues continuously with every Solana block (~400ms).

KYC/KYC Enabled

Yields can be generated exclusively by KYC/KYB-verified institutional entities, with regulated lending operations in top-tier jurisdictions.

Full Transparency

Real-time reporting on collateral positions, loan health, weighted average LTVs, and monthly third-party attestations by professional accounting firms.

White-Glove Setup

Dedicated, isolated vaults per partner, invisible on Kamino's public interface. Full control over liquidity management, risk oversight, and real-time reporting.

Institutional Yield API

Example Setup

Yield generated via KYC/KYB
enabled borrowing architecture

Off-Chain Collateral

Borrow on-chain against
custodied collateral via
tri-party agreement.

CUSTODIAN INTEGRATION

BUILT IN COLLABORATION WITH

Get on-chain liquidity. Retain qualified custody. Avoid smart contract risk.

What is Off-Chain Collateral?

Kamino Off-Chain Collateral enables institutions to borrow stablecoins onchain while its collateral remains in qualified custody, entailing no smart contract risk to underlying holdings, while tapping into Kamino's onchain liquidity layer.

Tri-Party Agreement and Chainlink Pricing

This structure is governed by a tri-party agreement between the borrower, custodian, and Kamino's SPV (representative of liquidity providers).

Collateral value is verified via Chainlink attestations, read directly from custodian balances, and published at regular intervals.

White-Glove Market Setup

Eligible collateral assets for Kamino's Off-Chain Collateral product includes SOL, natively staked SOL, and BTC, with more to be added pending demand.

Kamino creates a private, isolated market for the borrower, with parameters tailored as needed

Fixed Rates. Fixed Terms.

Predictable borrowing costs for long-term financial strategies.

LAUNCHING WITH

FALCONX

01

Loans Originated

Once borrowed, rates are set for the entire duration.

02

Lending UX

Rates are not compressed by demand or supply.

03

Instant Liquidity

Integration with curated Lending Vaults enables day-one liquidity.

Private Credit

Generate yield from institutional borrow demand, backed by BTC held in qualified custodians.

Private Credit deploys capital to regulated lending operations that make overcollateralized loans to verified institutional borrowers. BTC collateral is secured in qualified custodians, with no title transfer to the lender.

Private Credit provides a high level of transparency, with real-time collateral and loan-health reporting, and monthly third-party collateral attestation.

Conservative risk parameters, including 60% maximum LTV ratios and no rehypothecation of collateral.

Kamino BuildKit

Full suite of APis + SDKs

Fintechs and exchanges can integrate yield, vaults, borrowing, liquidations and oracles.

RWA DEX

Oracle-priced liquidity for tokenized assets,
enabling deep liquidity at fair value, always

FOR ASSET ISSUERS

RWA DEX means far less liquidity management. Eliminating the need for 3rd party market maker agreements by ensuring assets trade at accurate prices with deep liquidity

FOR USERS

Any RWA onboarded to Kamino's RWA DEX can be purchased onchain, at fair value, always.

Real-World Pricing

Kamino RWA DEX will ensure that any tokenized asset — treasuries, stocks, commodities, receivables, and more — has deep onchain liquidity around its live real-world price

Dynamic Price Updates

Liquidity deployment will update in real-time, with asset-specific modeling to ensure that liquidity is always deployed around real-world prices.

Versatile Architecture

The RWA DEX architecture can support a wide range of tokenized assets and pricing mechanisms — bespoke solutions can be built in collaboration with Kamino.

APPENDIX:

PRIME Multiply on Kamino

kamino

Institutional-grade HELOC yield,
amplified on-chain.

PRIME Multiply

Annualized Net Yield by Leverage

Leveraged Carry Trades

Amplify PRIME yield through positive carry — the spread between collateral yield and borrow cost.

~90% of all PRIME on Kamino flows through Multiply. This is the dominant use case and primary source of PRIME demand.

How it Works

In a single transaction:

1. Deposit PRIME as collateral (earning ~8% base yield)
2. Borrow stablecoins against it (paying ~5-7%)
3. Buy more PRIME with borrowed stablecoins
4. Repeat — up to 8.5x

PRIME Multiply Safeguards

Feature	Overview
Utilization-capped borrow rates.	Borrow utilization on the PRIME market is capped at 90%. The borrow rate curve is engineered so that the Multiply loop remains profitable up to 97% utilization — a 7% buffer above the cap.
3% LTV buffer at max leverage	Max borrow LTV is 88%; liquidation LTV is 91%. At max leverage, there is a 3% buffer to the liquidation threshold, providing a margin of safety against borrow rate volatility and potential PRIME price fluctuations
Verified historical performance.	PRIME Multiply performance is independently verifiable with Kamino's live backtesting tool, using historical data to simulate performance at different leverage levels. Available here .

PRIME Multiply Realized Performance

Cumulative Growth Since Launch:
PRIME vs Leveraged Multiply

Growth of position at different leverage levels, based
on real average APYs (12/04/2025 - 02/18/2026)

* Past performance does not guarantee future results. Leveraged positions
carry additional risk including liquidation.

Realized PRIME Multiply Returns (76D): **PRIME 1x – 1.61%** **MULTIPLY 3x – 2.47%** **MULTIPLY 5x – 3.26%** **MULTIPLY 8x – 4.43%**
